

Technical Report: 2030 Burger King Sales Performance Analysis

1. Outline

- **Introduction:** Project context for the 2030 fiscal year.
- **Story of Data:** Origin and structure of the sales records.
- **Data Splitting and Preprocessing:** Cleaning and industry context.
- **Pre-Analysis:** Initial observations of seasonal trends.
- **In-Analysis:** Deep dive into products, personnel, and regions.
- **Post-Analysis and Insights:** Validation of findings.
- **Data Visualizations & Charts:** Consolidation of the 2030 Dashboard.
- **Recommendations and Observations:** Strategic business pivots.
- **Conclusion:** Summary and limitations.
- **References & Appendices:** Data sources.

2. Introduction

- **Objective of the Project:** To analyze the annual sales performance of Burger King for the year 2030, specifically evaluating regional contributions, top-performing product categories, and sales team efficiency.
- **Problem Being Addressed:** Identifying which regions and product lines are driving growth versus those requiring operational intervention to meet annual targets.
- **Key Datasets and Methodologies:** This analysis utilizes **Analytical_Report_2.xlsx** and **Raw_Data.xlsx**. Methodologies include the use of Pivot Tables for data aggregation and radar charts for regional comparisons.

3. Story of Data

- **Data Source:** Internal sales records and point-of-sale (POS) systems captured in **Raw_Data.xlsx**.
- **Data Structure:** The data is organized chronologically by month (Jan–Dec) and categorized by region (North, South, East, West), product type, and assigned salesperson.
- **Important Features:** Key variables include **Revenue** (in thousands of USD), **Customer Type** (Company D, H, BB), and **Product Categories** (Beverages, Sauces, Jams).

4. Data Splitting and Preprocessing

- **Data Cleaning:** Records from **Raw_Data.xlsx** were audited for consistency, ensuring that monthly revenue figures matched the regional totals presented in the final dashboard.
- **Industry Context:** The analysis is set within the **Quick Service Restaurant (QSR)** and food retail industry, where high-volume, low-margin transactions require precise logistics.
- **Stakeholders:** Senior Management, Regional Operations Leads, and the Supply Chain Department.
- **Value to the Industry:** Offers a blueprint for "just-in-time" inventory management based on seasonal surges (e.g., June and December peaks).

5. Pre-Analysis

- **Identify Key Trends:** Preliminary review of the **Sales Trend** line graph shows significant volatility, with notable revenue peaks in **June** (\$55,601.61) and **December** (\$66,642.78).
- **Initial Insights:** There appears to be a strong correlation between year-end holiday periods and maximum revenue output, while February represents a significant annual low (\$19,985.50).

6. In-Analysis

- **Analysis Techniques:** Using **Analytical_Report_2.xlsx**, data was segmented using Excel Pivot Tables to determine that **Beverages** represent the largest product share at **47.84%**.
- **Unconfirmed Insights:** High performance by **Nancy Freehafer** (39.30% of sales) suggests a correlation between specific sales territories and individual performance that warrants further investigation.
- **Recommendations:** Investigate the "South" and "North" regions, as the radar chart indicates these are the highest revenue-generating zones.

7. Post-Analysis and Insights

- **Key Findings:**
 - **Annual High:** December achieved the highest monthly revenue of \$66,642.78.

- **Regional Dominance:** The **North** region led all territories with a total of \$141,680.34.
 - **Customer Loyalty:** **Company D** is the most significant client, accounting for **41.70%** of top customer sales.
- **Comparison:** Initial expectations predicted a steady growth curve; however, the data revealed a "W-shaped" recovery throughout the year, with a sharp dip in April and July.

8. Data Visualizations & Charts

- **Sales Trend (Line Chart):** Tracks the monthly performance from \$32.9k in January to the \$66.6k peak in December.
- **Product Mix (Donut Chart):** Visualizes the dominance of **Beverages** (47.84%) over **Jams/Preserves** (22.30%).
- **Regional Performance (Radar Chart):** Clearly displays the **North** (\$141k) and **South** (\$93k) as the primary pillars of the business.

9. Recommendations and Observations

- **Actionable Insights:**
 - **Beverage Expansion:** Since Beverages account for nearly half of all sales, introduce premium beverage tiers to increase average transaction value.
 - **Territory Reassignment:** Analyze **Nancy Freehafer's** methods to train **Andrew Cencini**, who currently holds the smallest share (25.32%) among top salespersons.
- **Unexpected Outcomes:** Despite being a major region, the **West** (\$91,251.98) slightly underperformed compared to the **South**, despite typically having higher market saturation.

10. Conclusion

- **Key Learnings:** 2030 was a year of extreme seasonality, dominated by Beverage sales and Northern regional performance.
- **Limitations:** The data in **Raw_Data.xlsx** does not account for external market factors (e.g., competitor pricing) that may have caused the February and July slumps.
- **Future Research:** Conduct a deep-dive analysis into **Company BB** to understand why their share (27.13%) lags significantly behind Company D.

11. References & Appendices

- **References:**
 - **Analytical_Report_2.xlsx:** Aggregated metrics and pivot calculations.
 - **Raw_Data.xlsx:** Baseline transactional data.
 - **Sales Dashboard for Burger King 2030:** Visual summary of KPIs.
- **Appendices:** Detailed monthly breakdown of regional sales available in the "Insights" tab of the source file.
